

Title	EHS19: Hydrocarbon Reduction Release Toolkit
Publisher/Author	UKOOA
Publication Date	2004
Scope	<p>Following the challenge by the Health and Safety Executive to substantially improve performance regarding hydrocarbon releases, UKOOA established the Hydrocarbon Release Reduction Work Group in 2000. Its aim was to focus industry efforts not just in making a step reduction over a three-year target period but to promote a 'no leak culture' which would be sustainable for the long-term future of the industry. Over a 3-year period this Work Group helped develop and collate a collection of good practice techniques and best practice guidelines aimed at assisting Operators in their efforts to reduce releases.</p> <p>This 'Toolkit' is a collection of these good practices, and provides a central reference to Managers, Supervisors and the Workforce.</p>
